Colour and Efflorescence. Colour: Stone and Slate colours in this brochure are subject to the limitations of the printing process and are for guidance only. Efflorescence: The phenomenon of efflorescence has been a problem to the construction industry for decades. The cause lies in the basis chemistry of all Portland cements. Efflorescence in SIGA Heritage products is a temporary phenomena and will disappear over time.

SIGA Heritage Reproduction Stone
Preserving Britain's Heritage

SIGA Heritage Reproduction Slate

The Heritage Range of artificial stone roofing products are hand crafted to give an authentic roofscape, offering detailed moulding, a choice of colours and a range of sizes.

The glass fibre cement construction provides a light yet durable roofing material. An easy to lay format and a range of compatible products, including ridges and in-line ventilation systems, create an extremely versatile and cost effective alternative to natural products.

Each individual slate is hand crafted using moulds taken from stone slate originals. As with natural stone, shades vary, with no two slates being identical. This, combined with the surface detail and hand colouring, ensures a truly authentic roofscape.

SIGA Heritage reproduction stone roofing slates have been designed in consultation with professional roofers and architects, to achieve an easy to lay slating format, resulting in a coursed and diminishing stone slate roof.

The Slates are constructed from Glassfibre Reinforced Concrete (GRC) producing a strong and durable slate weighing only 65kgm^2. Their construction allows them to be cut easily, without cracking or breaking, and looks like stone when cut.

Weight 65kgm^2

The construction of our slates makes them 20% lighter than the original stone, saving on labour and timber costs. In real terms that means 16m^2 of our slates per ton compared to 7m^2 per ton of natural stone slates.

Advantages

SIGA HERITAGE
REPRODUCTION STONE

COTSWAY

With the increasing expense and limited availability of natural Cotswold stone roofing slates, SIGA Heritage have created a genuine alternative with the Cotsway range of reproduction stone roofing slates, which match the versatility and beauty of real stone.

Cotsway slates create a truly diminishing stone slate roof with a vast range of varying sizes. Cotsway reproduction stone slates are true to the original in terms of colour, texture and performance.

REPRODUCTION STONE

RUTLAND

With the closure of the Collyweston Quarry back in the 50's and 60's, the East Midlands have been eagerly awaiting a product that replicates the unique and rustic beauty of the original Collyweston slate that has given the area it's distinctive charm. Finally, a reproduction slate worthy of the name has been found.

The reproduction slates are faithful to the original in terms of colour, texture and performance.

CHARNWOOD

Swithland slate roofs are an important feature of historic buildings in the East Midlands.

With the closure of the two main Pit Quarries back in the 1800's, the East Midlands have been eagerly awaiting a product that replicates the unique and rustic beauty of the original Swithland slate that has given the area it's distinctive charm.

The reproduction slates are faithful to the original in terms of colour, texture and performance.
